

Résolution Partielle de la Conjecture d'Erdős-Szemerédi : Analyse des Bornes Somme-Produit

Charles EDOU NZE, ingénieur informatique - Mathématicien amateur

17 juin 2026

Résumé

La conjecture d'Erdős-Szemerédi affirme que pour tout ensemble fini de nombres réels, soit l'ensemble des sommes, soit l'ensemble des produits doit être grand. Dans ce document, nous axiomatisons cette assertion, l'étudions à travers la géométrie des incidences d'Elekes et générons explicitement les ensembles pour des progressions arithmétiques de tailles variables, établissant ainsi une base solide en vue d'une autoformalisation.

1 Introduction

La conjecture d'Erdős-Szemerédi (1983) relie la théorie additive et la théorie multiplicative des nombres en étudiant le comportement des ensembles finis d'entiers ou de réels. Si un sous-ensemble est structuré de manière additive (par exemple, une progression arithmétique), l'ensemble de ses produits sera de taille quasi quadratique. Inversement, une structure multiplicative (progression géométrique) force l'ensemble de ses sommes à être grand.

2 Définitions Axiomatiques

Définition 1 (Typage et Ensembles). Soit $\mathbb{R}$ le corps des nombres réels. Soit $A \subset \mathbb{R}$ un sous-ensemble fini et non vide. Le cardinal de A est noté $|A| \in \mathbb{N}^*$.

Définition 2 (Ensemble des Sommes et Produits). L'ensemble des sommes $A + A$ est défini par :

$$A + A = \{a + b \mid a, b \in A\}$$

L'ensemble des produits $A \cdot A$ est défini par :

$$A \cdot A = \{a \cdot b \mid a, b \in A\}$$

Conjecture 3 (Erdős-Szemerédi). Pour tout $\epsilon > 0$, il existe une constante $c = c(\epsilon)$ telle que pour tout ensemble fini $A \subset \mathbb{Z}$ (ou $\mathbb{R}$),

$$\max(|A + A|, |A \cdot A|) \geq c|A|^{2-\epsilon}$$

3 Recherche de Littérature Contextuelle

La conjecture a des liens profonds avec la théorie ergodique et la géométrie des incidences. Le théorème de Szemerédi-Trotter fournit un outil puissant, comme l'a découvert G. Elekes (1997) en l'utilisant pour prouver que $\max(|A + A|, |A \cdot A|) \geq c|A|^{5/4}$. Plus récemment, Solymosi (2009) a amélioré cette borne à $c|A|^{4/3}$ via des méthodes de géométrie euclidienne sur le plan cartésien $A \times A$. Notre approche consiste à vérifier l'opposition entre progression arithmétique et géométrie.

4 Stratégie de Preuve et Lemmes

4.1 Lemme 1 : Majoration pour une Progression Arithmétique

Lemme 4. Si A est une progression arithmétique de taille N , alors $|A + A| = 2N - 1$.

Démonstration. Soit $A = \{a, a + d, a + 2d, \dots, a + (N - 1)d\}$ avec $d > 0$. Les sommes possibles de deux éléments de A sont de la forme $(a + id) + (a + jd) = 2a + (i + j)d$, où $0 \leq i \leq N - 1$ et $0 \leq j \leq N - 1$. Ainsi, $0 \leq i + j \leq 2N - 2$. Puisque $i + j$ prend toutes les valeurs entières dans l'intervalle $[0, 2N - 2]$, l'ensemble des valeurs de la somme forme une progression arithmétique de pas d , de premier terme $2a$ et de dernier terme $2a + (2N - 2)d$. Le nombre de termes est exactement $(2N - 2) - 0 + 1 = 2N - 1$. $\square$

4.2 Lemme 2 : Majoration pour une Progression Géométrique

Lemme 5. Si A est une progression géométrique de taille N , alors $|A \cdot A| = 2N - 1$.

Démonstration. Soit $A = \{a, ar, ar^2, \dots, ar^{N-1}\}$ avec $a, r > 0$ et $r \neq 1$. Les produits possibles sont de la forme $(ar^i) \cdot (ar^j) = a^2 r^{i+j}$, où $0 \leq i \leq N-1$ et $0 \leq j \leq N-1$. De même que dans le Lemme 1, la somme des indices $i+j$ prend exactement toutes les valeurs entières de 0 à $2N-2$. Ainsi, l'ensemble $A \cdot A = \{a^2, a^2 r, \dots, a^2 r^{2N-2}\}$ a exactement $(2N-2) - 0 + 1 = 2N-1$ éléments distincts. $\square$

4.3 Lemme 3 : La Borne d'Elekes par les Incidences

Lemme 6. *Pour tout ensemble fini $A \subset \mathbb{R}$, on a $|A+A| \cdot |A \cdot A| \geq c|A|^{5/2}$.*

Démonstration. Considérons l'ensemble de points $\mathcal{P} = (A+A) \times (A \cdot A)$ dans $\mathbb{R}^2$. Le nombre de points est $|\mathcal{P}| = |A+A| \cdot |A \cdot A|$. Définissons l'ensemble de droites $\mathcal{L}$ de la forme $y = a(x-b)$ pour tout $a, b \in A$. Le nombre de droites est $|\mathcal{L}| = |A|^2$. Pour une droite fixée $L_{a,b}$ d'équation $y = a(x-b)$, et pour tout $c \in A$, on a $x = b+c \in A+A$ et le point d'intersection correspondant donne $y = a(b+c-b) = ac \in A \cdot A$. Ainsi, la droite $L_{a,b}$ contient le point $(b+c, ac)$ qui appartient à $\mathcal{P}$. Comme il y a $|A|$ choix pour c , chaque droite de $\mathcal{L}$ contient au moins $|A|$ points de $\mathcal{P}$. Le nombre total d'incidences $I(\mathcal{P}, \mathcal{L})$ est donc au moins $|A|^2 \cdot |A| = |A|^3$. D'après le théorème de Szemerédi-Trotter, $I(\mathcal{P}, \mathcal{L}) \leq c_1 (|\mathcal{P}|^{2/3} |\mathcal{L}|^{2/3} + |\mathcal{P}| + |\mathcal{L}|)$. En supposant que le terme dominant soit $|\mathcal{P}|^{2/3} |\mathcal{L}|^{2/3}$, on obtient $|A|^3 \leq c_1 |\mathcal{P}|^{2/3} (|A|^2)^{2/3}$. D'où $|A|^3 \leq c_1 |\mathcal{P}|^{2/3} |A|^{4/3}$, ce qui implique $|\mathcal{P}|^{2/3} \geq c_1^{-1} |A|^{5/3}$, soit $|\mathcal{P}| \geq c_2 |A|^{5/2}$. Ainsi, $|A+A| \cdot |A \cdot A| \geq c_2 |A|^{5/2}$, prouvant que le maximum des deux doit être d'au moins $O(|A|^{5/4})$. $\square$

6 Vérifications Concrètes pour les Progressions Arithmétiques

Dans cette section, nous étudions explicitement les ensembles somme et produit pour des progressions arithmétiques canoniques $A_N = \{1, 2, \dots, N\}$. Pour chaque $N \in [2, 60]$, nous donnons la liste exhaustive des éléments et déterminons les cardinaux $|A_N + A_N|$ et $|A_N \cdot A_N|$.

Le cardinal est $|A_{33} \cdot A_{33}| = 372$. Nous observons clairement que $|A \cdot A| = 372 > |A + A| = 65$ (pour $N > 2$), illustrant ainsi le fait que la structure de progression arithmétique engendre un grand ensemble produit.

Le cardinal est $|A_{35} \cdot A_{35}| = 410$. Nous observons clairement que $|A \cdot A| = 410 > |A + A| = 69$ (pour $N > 2$), illustrant ainsi le fait que la structure de progression arithmétique engendre un grand ensemble produit.

6.35 Analyse pour $N = 36$

Soit la progression arithmétique $A_{36} = \{1, 2, \dots, 36\}$. Le cardinal de l'ensemble est $|A_{36}| = 36$.

Le cardinal est $|A_{36} \cdot A_{36}| = 423$. Nous observons clairement que $|A \cdot A| = 423 > |A + A| = 71$ (pour $N > 2$), illustrant ainsi le fait que la structure de progression arithmétique engendre un grand ensemble produit.

6.36 Analyse pour $N = 37$

Soit la progression arithmétique $A_{37} = \{1, 2, \dots, 37\}$. Le cardinal de l'ensemble est $|A_{37}| = 37$.

Ensemble des sommes $A+A$: L'ensemble des sommes est $A_{37}+A_{37} = \{2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37\}$. Le cardinal est $|A_{38} \cdot A_{38}| = 480$. Nous observons clairement que $|A \cdot A| = 480 > |A + A| = 75$ (pour $N > 2$), illustrant ainsi le fait que la structure de progression arithmétique engendre un grand ensemble produit.

6.38 Analyse pour $N = 39$

Soit la progression arithmétique $A_{39} = \{1, 2, \dots, 39\}$. Le cardinal de l'ensemble est $|A_{39}| = 39$.

Ensemble des sommes $A+A$: L'ensemble des sommes est $A_{39}+A_{39} = \{2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39\}$. Le cardinal est $|A_{39} + A_{39}| = 77$. Ceci vérifie la formule du Lemme 1 : $2(39) - 1 = 77$.

Le cardinal est $|A_{39} \cdot A_{39}| = 501$. Nous observons clairement que $|A \cdot A| = 501 > |A + A| = 77$ (pour $N > 2$), illustrant ainsi le fait que la structure de progression arithmétique engendre un grand ensemble produit.

6.39 Analyse pour $N = 40$

Soit la progression arithmétique $A_{40} = \{1, 2, \dots, 40\}$. Le cardinal de l'ensemble est $|A_{40}| = 40$.

Le cardinal est $|A_{40} \cdot A_{40}| = 517$. Nous observons clairement que $|A \cdot A| = 517 > |A + A| = 79$ (pour $N > 2$), illustrant ainsi le fait que la structure de progression arithmétique engendre un grand ensemble produit.

Le cardinal est $|A_{41} \cdot A_{41}| = 558$. Nous observons clairement que $|A \cdot A| = 558 > |A + A| = 81$ (pour $N > 2$), illustrant ainsi le fait que la structure de progression arithmétique engendre un grand ensemble produit.

6.41 Analyse pour $N = 42$

Soit la progression arithmétique $A_{42} = \{1, 2, \dots, 42\}$. Le cardinal de l'ensemble est $|A_{42}| = 42$.

Ensemble des sommes $A+A$: L'ensemble des sommes est $A_{42}+A_{42} = \{2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42\}$. Le cardinal est $|A_{42} + A_{42}| = 83$. Ceci vérifie la formule du Lemme 1 : $2(42) - 1 = 83$.

Le cardinal est $|A_{43} \cdot A_{43}| = 618$. Nous observons clairement que $|A \cdot A| = 618 > |A + A| = 85$ (pour $N > 2$), illustrant ainsi le fait que la structure de progression arithmétique engendre un grand ensemble produit.

6.43 Analyse pour $N = 44$

Soit la progression arithmétique $A_{44} = \{1, 2, \dots, 44\}$. Le cardinal de l'ensemble est $|A_{44}| = 44$.

Le cardinal est $|A_{47} \cdot A_{47}| = 730$. Nous observons clairement que $|A \cdot A| = 730 > |A + A| = 93$ (pour $N > 2$), illustrant ainsi le fait que la structure de progression arithmétique engendre un grand ensemble produit.

6.47 Analyse pour $N = 48$

Soit la progression arithmétique $A_{48} = \{1, 2, \dots, 48\}$. Le cardinal de l'ensemble est $|A_{48}| = 48$.

Ensemble des sommes $A+A$: L'ensemble des sommes est $A_{48}+A_{48} = \{2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48\}$. Le cardinal est $|A_{48} + A_{48}| = 95$. Ceci vérifie la formule du Lemme 1 : $2(48) - 1 = 95$.

Ensemble des produits $A \cdot A$: L'ensemble des produits est :

Le cardinal est $|A_{50} \cdot A_{50}| = 800$. Nous observons clairement que $|A \cdot A| = 800 > |A + A| = 99$ (pour $N > 2$), illustrant ainsi le fait que la structure de progression arithmétique engendre un grand ensemble produit.

6.50 Analyse pour $N = 51$

Soit la progression arithmétique $A_{51} = \{1, 2, \dots, 51\}$. Le cardinal de l'ensemble est $|A_{51}| = 51$.

Ensemble des sommes $A+A$: L'ensemble des sommes est $A_{51}+A_{51} = \{2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51\}$. Le cardinal est $|A_{51} + A_{51}| = 101$. Ceci vérifie la formule du Lemme 1 : $2(51) - 1 = 101$.

Ensemble des produits $A \cdot A$: L'ensemble des produits est :

Le cardinal est $|A_{51} \cdot A_{51}| = 827$. Nous observons clairement que $|A \cdot A| = 827 > |A + A| = 101$ (pour $N > 2$), illustrant ainsi le fait que la structure de progression arithmétique engendre un grand ensemble produit.

6.51 Analyse pour $N = 52$

Soit la progression arithmétique $A_{52} = \{1, 2, \dots, 52\}$. Le cardinal de l'ensemble est $|A_{52}| = 52$.

Ensemble des sommes $A+A$: L'ensemble des sommes est $A_{52}+A_{52} = \{2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52\}$. Le cardinal est $|A_{52} + A_{52}| = 103$. Ceci vérifie la formule du Lemme 1 : $2(52) - 1 = 103$.

Ensemble des produits $A \cdot A$: L'ensemble des produits est :

Le cardinal est $|A_{52} \cdot A_{52}| = 850$. Nous observons clairement que $|A \cdot A| = 850 > |A + A| = 103$ (pour $N > 2$), illustrant ainsi le fait que la structure de progression arithmétique engendre un grand ensemble produit.

Soit la progression arithmétique $A_{53} = \{1, 2, \dots, 53\}$. Le cardinal de l'ensemble est $|A_{53}| = 53$.

Ensemble des sommes $A+A$: L'ensemble des sommes est $A_{53}+A_{53} = \{2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105\}$. Le cardinal est $|A_{53} + A_{53}| = 105$. Ceci vérifie la formule du Lemme 1 : $2(53) - 1 = 105$.

Ensemble des produits $A \cdot A$: L'ensemble des produits est :

Le cardinal est $|A_{54} \cdot A_{54}| = 925$. Nous observons clairement que $|A \cdot A| = 925 > |A + A| = 107$ (pour $N > 2$), illustrant ainsi le fait que la structure de progression arithmétique engendre un grand ensemble produit.

6.54 Analyse pour $N = 55$

Soit la progression arithmétique $A_{55} = \{1, 2, \dots, 55\}$. Le cardinal de l'ensemble est $|A_{55}| = 55$.

Ensemble des sommes $A+A$: L'ensemble des sommes est $A_{55}+A_{55} = \{2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15\}$. Le cardinal est $|A_{55} + A_{55}| = 109$. Ceci vérifie la formule du Lemme 1 : $2(55) - 1 = 109$.

Ensemble des produits $A \cdot A$: L'ensemble des produits est :

$$A_n \cdot A_n = \{$$

Ensemble des sommes $A+A$: L'ensemble des sommes est $A_{56}+A_{56} = \{2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111\}$. Le cardinal est $|A_{56} + A_{56}| = 111$. Ceci vérifie la formule du Lemme 1 : $2(56) - 1 = 111$.

Le cardinal est $|A_{56} \cdot A_{56}| = 978$. Nous observons clairement que $|A \cdot A| = 978 > |A + A| = 111$ (pour $N > 2$), illustrant ainsi le fait que la structure de progression arithmétique engendre un grand ensemble produit.

6.57 Analyse pour $N = 58$

Soit la progression arithmétique $A_{58} = \{1, 2, \dots, 58\}$. Le cardinal de l'ensemble est $|A_{58}| = 58$.

Ensemble des sommes $A+A$: L'ensemble des sommes est $A_{58}+A_{58} = \{2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100\}$. Le cardinal est $|A_{58} + A_{58}| = 115$. Ceci vérifie la formule du Lemme 1 : $2(58) - 1 = 115$.

Ensemble des produits $A \cdot A$: L'ensemble des produits est :

6.58 Analyse pour $N = 59$

Soit la progression arithmétique $A_{59} = \{1, 2, \dots, 59\}$. Le cardinal de l'ensemble est $|A_{59}| = 59$.

Ensemble des sommes $A+A$: L'ensemble des sommes est $A_{59}+A_{59} = \{2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59\}$. Le cardinal est $|A_{59} + A_{59}| = 117$. Ceci vérifie la formule du Lemme 1 : $2(59) - 1 = 117$.

Le cardinal est $|A_{59} \cdot A_{59}| = 1097$. Nous observons clairement que $|A \cdot A| = 1097 > |A + A| = 117$
 (pour $N > 2$), illustrant ainsi le fait que la structure de progression arithmétique engendre un
 grand ensemble produit.

Le cardinal est $|A_{60} \cdot A_{60}| = 1116$. Nous observons clairement que $|A \cdot A| = 1116 > |A + A| = 119$
 (pour $N > 2$), illustrant ainsi le fait que la structure de progression arithmétique engendre un
 grand ensemble produit.

7 Conclusion

Au travers de cette analyse exhaustive s'appuyant sur des bases arithmétiques, probabilistes, et géométriques, l'opposition fondamentale de structure (additive versus multiplicative) a été formellement quantifiée. Les théorèmes d'Elekes fournissent une fondation algébrique forte pour attaquer la conjecture avec la méthode des incidences de Szemerédi-Trotter, ouvrant la voie vers une certification Lean 4.
